

Open Console (F12) and type: `addData(x, y)`

Type **testLR(value)** in the Console (F12) to simulate convergence.

The screenshot shows a Copilot chat window with the following content:

```
testLR(0.1)
Simulation complete for LR: 0.01. Current status: Converging index.html:82
Simulation complete for LR: 0.1. Current status: Converging index.html:82
undefined
```

3. Predict Unseen Inputs & Compare Results

Current Model Formula: $y = 3.5x + 12.0$

Console Action: Open F12 and type predict(inputValue)
Example: predict(10.5) or predict(2.0)

Unseen Input (X)	Expected Result (Mathematical)	Model Prediction	Accuracy (%)
77	281.50	281.48	99.99%
1	15.50	15.45	99.70%
5	29.50	29.54	99.87%

Console

```
> predict(5)
Input: 5 | Expected: 29.50 | Predicted: 29.54  index.html:81
< undefined
> predict(1)
Input: 1 | Expected: 15.50 | Predicted: 15.45  index.html:81
< undefined
> predict(77)
Input: 77 | Expected: 281.50 | Predicted: 281.48  index.html:81
< undefined
>
```
